1.CodeWars:	3
2.Icons8:	3
3.FontSpace:	4

1.CodeWars:

I find CodeWars interesting because it's a webpage that allows you to do different challenges from programming languages and, in that way, you can improve in the languages you are not good and you can keep practicing with the languages that you already know.

You can learn from the way that other developers solve the challenges and learn more in that way and, of course, you can share your knowledge with others.

You can also like “play” with other people to motivate you to improve on the language.

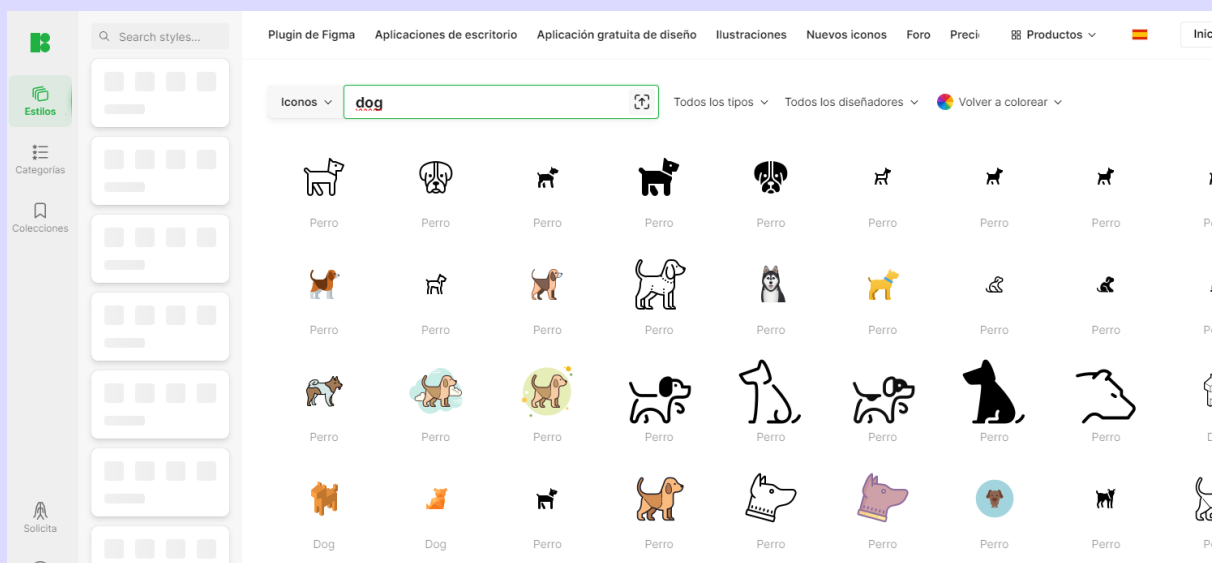

2.Icons8:

Icons8 is a webpage where you can find, as its name says, all kind of icons. I personally use it a lot to change the icons from the apps on my computer or to decorate some webpages.

It's very easy and intuitive to use and you can select the style and the size you want in the icon before installing it.

You can not only search icons, you can also search images, illustrations, music and design tools.

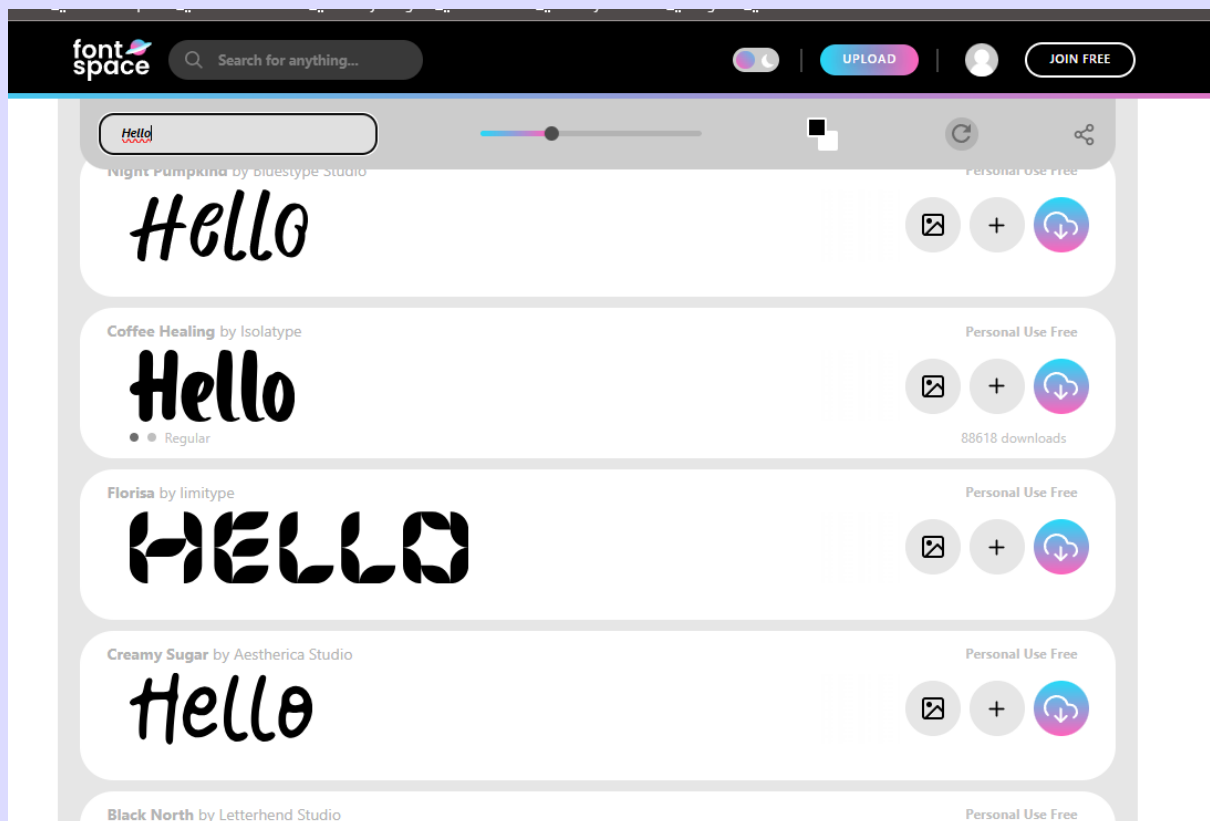

You can also filter by category and upload an icon or image to search some similar to it.

3.FontSpace:

FontSpace is a webpage where you can change the Font from your text. You can provide the page a text and the page gives you the text but in a lot of different fonts.

Its so useful when you want an specific style in your web and you want to change the Font from your text to “match” it with the webpage.
